### WUNDERKIND-Custom: Optimal grip also for all Ø22.2 mm handlebars

***D-Breisach a. R. / 24th June 2019*** Steering and accelerating are the most important tasks of a motorcycle grip. And it can reliably fulfill these tasks only when it lies comfortable and non-slip in the hand. Therefore, WUNDERKIND-Custom has developed a motorcycle grip that combines these features.

Until now, these noble handlebar grips of the South German premium manufacturer were available only for 1 inch handlebars. Since June, they are also available for handlebars with a diameter of 22.2 millimeters. The grips are suitable for the gas and clutch side and are equipped with a two-part grip rubber.

"In order to meet the demands for comfort and grip safety, a variety of shape and material variants are on the market intending to help the motorcyclist to find the personal optimum. We focus on soft material in the grip area. On the one hand, a rubber reduces vibrations which can be an advantage, especially on long trips. On the other hand, it provides a firm and pleasant grip even in damp conditions", explains managing director Christian Mehlhorn.

The ends of the CNC-milled motorcycle grips are available in several versions, giving the individualist free choice: they offer ranges from open handle ends, as they are needed for the use of handlebar tail lights, through various exclusive designs.

The scope of delivery includes three different throttle cable connections to make the grip compatible with common Bowden cable variants. Costs: The simplest design version starts from EUR 89.90 incl. VAT.
